

DC08-40 Pilot Operated Check Valve

DESCRIPTION

A dual pilot operated check valve for use in blocking or load-holding circuits.

OPERATION

The **DC08-40** will block flow from 1 to 2, and from 4 to 3. Flow is allowed in the opposite direction when pressure is applied to port 2 and/or port 3.

The valve has a 3:1 pilot ratio, so at least 1/3 of the load pressure at port 1 or 4 is required at the pilot lines (ports 2 or 3) to open the flow passage to allow flow from ports 1 or 4.

The check is spring-biased at 25 psi to assure holding in a static or no load condition. An optional spring biased at 135 psi is available.

Note: Orifice disc cannot be used with this product.

FEATURES

- Hardened seat for long life and low leakage.
- Low pressure drop.
