PRESSURE CONTROLS

PR10-32  Pressure Reducing/Relieving

DESCRIPTION
A screw-in, cartridge-style, direct-acting, spool-type, hydraulic pressure reducing/re-
lieving valve with internal pilot and internal spring chamber drain, designed to act as a
pressure-regulating device for secondary circuits. It is intended for use in stable input
flow circuits.

OPERATION
In its steady state, the PR10-32 allows flow to pass bidirectionally from 2 to 1, with the
spring chamber constantly drained at 3.
On attainment of a pre-determined pressure at 1, the cartridge shifts to restrict input
flow at 2, thereby regulating pressure at 1. In this mode, the valve will also relieve 1 to
3 at approximately 10 bar (150 psi) over the reducing setting.

Note: Direct-acting PR series valves may not be suitable for some static load
applications. Consult factory.

FEATURES
• Adjustments cannot be backed out of the valve.
• Adjustments prohibit springs from going solid.
• Optional spring ranges to 145 bar (2100 psi).
• Hardened spool and cage for long life.
• Industry common cavity.

RATINGS
Operating Pressure: 207 bar (3000 psi) at Port 1 & 2; 68.9 bar (1000 psi) at Port 3
Proof Pressure: 517.1 bar (1500 psi) at Port 1 & 2; 103.4 bar (1500 psi) at Port 3
Burst Pressure: 1034 bar (15000 psi)
Flow Rating: 8 gpm (30.3 lpm)
Internal Leakage 2 to 3: 82 ml/minute (5 cu. in/minute) max.
ad ΔP 207 bar (3000 psi)

Standard Spring Range (Reducing Function): 2.4 to 27.6 bar (35 to 2100 psi)
Showed in To Order section. Due to manufacturing tolerances, it may be possible to
adjust the valve either lower or higher than the nominal ratings shown. If the valve
is adjusted beyond the recommended maximum pressure range for F and H
style adjuster options, the valve may not open to relieve pressure.
