

Overview

Description

A proportional solenoid-operated, 3-way, normally closed flow control, screw-in hydraulic cartridge valve intended for post-compensated applications with load sense systems. In post-compensated systems the load sense (port 1) of each of HSPEC16-32 valve is connected to highest load which maintains flow sharing when flow demand exceeds flow supply. Pressure compensation value of the valve defined as pressure difference between inlet and load sense ports is provided by appropriate setup of a pump load sense control or by additional pressure compensator valve, one for the whole system, in case if the pump is non-adjustable.

Operation

When de-energized, the HSPEC16-32XX blocks flow from port 3 to port 2. The valve will regulate flow out of port 2 regardless of load pressure with flow rate proportional to current applied to the solenoid.

Features

- Integral post-compensator.
- Integral load-sense.
- Reduced manifold space claim.
- Continuous-duty rated coils.
- Optional "A" type linear metering poppet.
- Manual override option.
- E-Coils rated up to IP69K.
- Flow sharing possible
- All HyPerformance[®] valves are tested to the rigorous standards of NFPA specification T2.6.1 and are tested at a verification level of 90% and an assurance of 99%

Notes

Orifice disc should not be used with this product.

Urethane seals recommended for operating pressures above 3500 psi (241 bar).
