

## 4/3 - 4/2 Directional valve elements with proportional control and with or without LS connections

B8\_80... (EDB-P)

**RE 18300-55**

Edition: 08.2016

Replaces: 02.2016

Size 4

Series 00

Maximum operating pressure 310 bar (4500 psi)

Maximum flow 17 l/min (4.5 gpm)

Port connections G 3/8 SAE6 - M16x1.5

### General specifications

Valve element with direct proportional control of spool.  
Control spools operated by solenoids with removable coils.

In the de-energized condition, the control spool is held in the central position by return springs.

Wet pin proportional tubes for DC coils, with push rod for mechanical override; nickel plated surface.

Manual override (push-button or screw type) available as option.

## Functional description

The sandwich plate design directional valve elements B8080... are compact direct operated proportional solenoid valves which control the start, the stop, the direction and the quantity of the oil flow. These elements basically consist of a stackable housing (1) with a control spool (2), one or two solenoids (5), and one or two return springs (4).

Energized by an electronic feed regulator, each solenoid (5) displaces the control spool (2) from its neutral-central position "0" proportionally to the current received, in open

loop mode; a regulated oil flow P to A , or P to B, is achieved. Once the solenoid is de-energized, the return spring (4) pushes the spool thrust washer (3) back against the housing and the spool (2) returns in its neutral-central position "0".

Each coil is fastened to the solenoid tube (5) by a ring nut (6). A pin (7) allows to push the spool (2) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Electronic feed regulators <sup>3)</sup>		Upon request

1) An electronic, open loop type, regulator with plug-in pins EN 175301-803 is available and can be fitted onto the solenoid directly.  
 For valve elements with two solenoids, two electronic regulators are needed.

### Characteristic curves

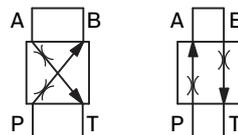

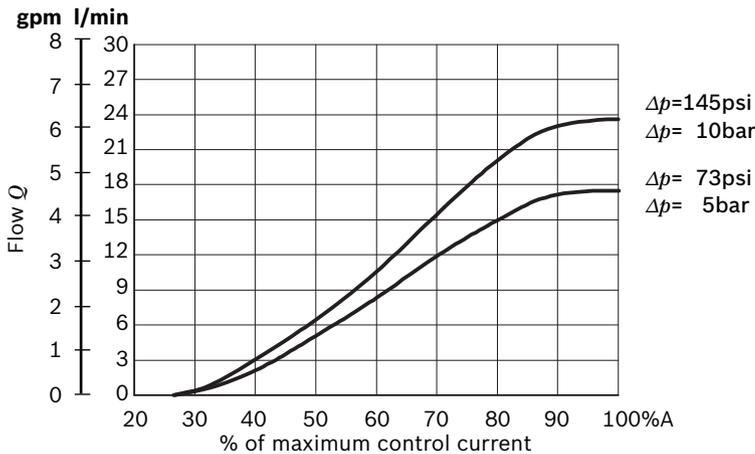

Ordering code S3: 4 l/min (1.06 gpm) with  $\Delta p$  5 bar (73 psi) P>A,B.

Ordering code S4: 9 l/min (2.38 gpm) with  $\Delta p$  5 bar (73 psi) P>A,B.

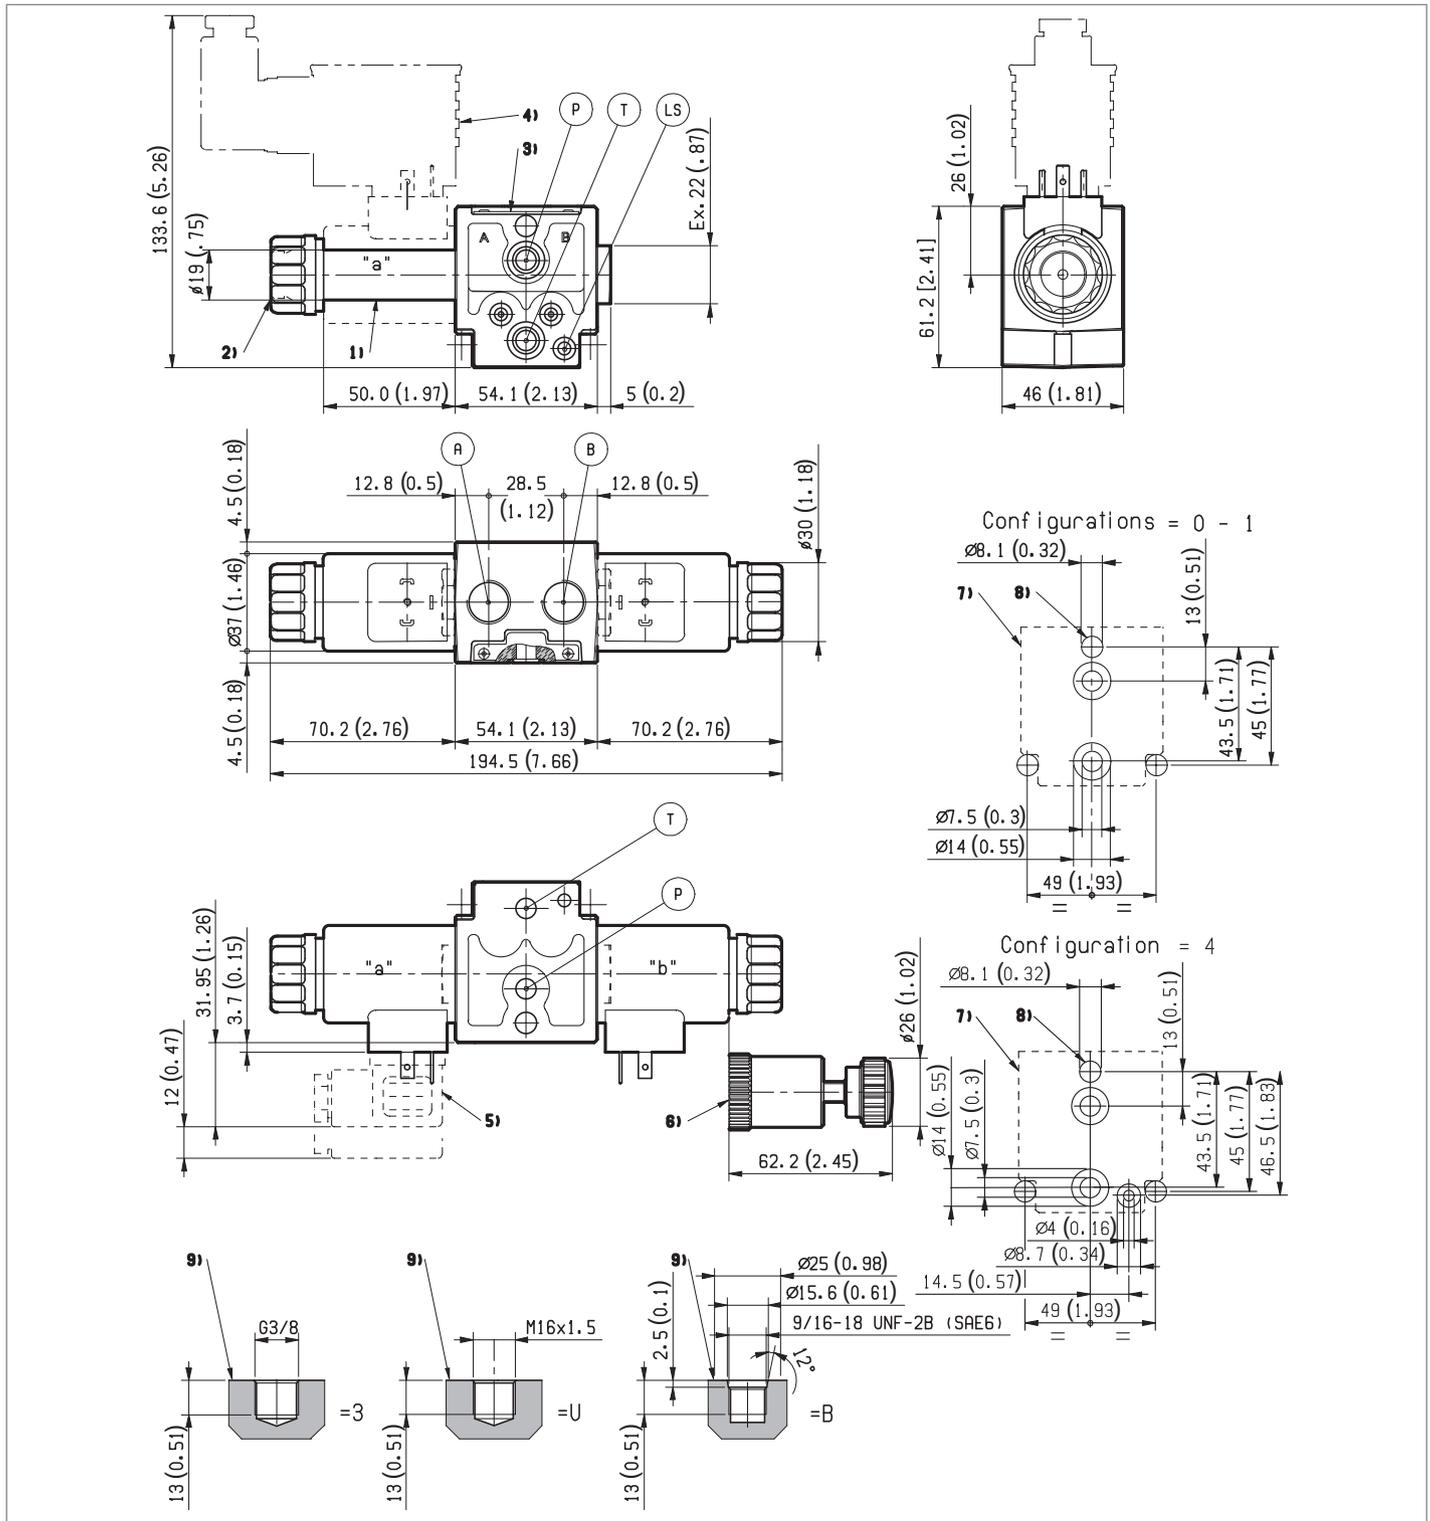

Ordering code S5: 17 l/min (4.50 gpm) with  $\Delta p$  5 bar (73 psi) P>A,B.

$\Delta p$  = valve pressure differential (inlet pressure  $P_p$  minus load  $P_l$  and minus return pressure  $P_t$ ).

**External dimensions and fittings**

- 1 Solenoid tube  $\varnothing$  19 mm (0.75 inch).
- 2 Ring nut for coil locking  $\varnothing$  30 mm (1.18 In); torque 6–7 Nm (4.4 – 5.2 ft-lb).
- 3 Identification label.
- 4 Dimension with electronic feed regulator.
- 5 Clearance needed for connector removal.
- 6 Optional screw type manual override, EF type, for spool opening:

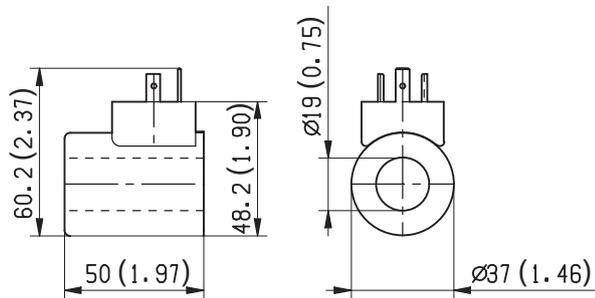

it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut.

Mat no. R933003848.

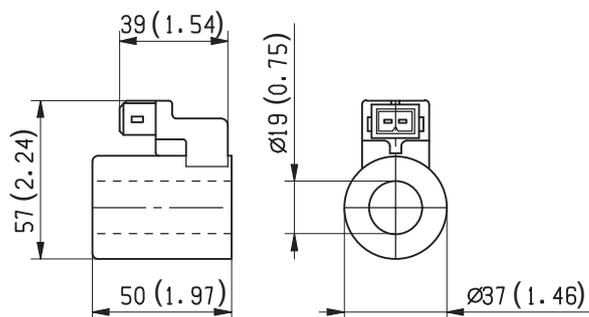

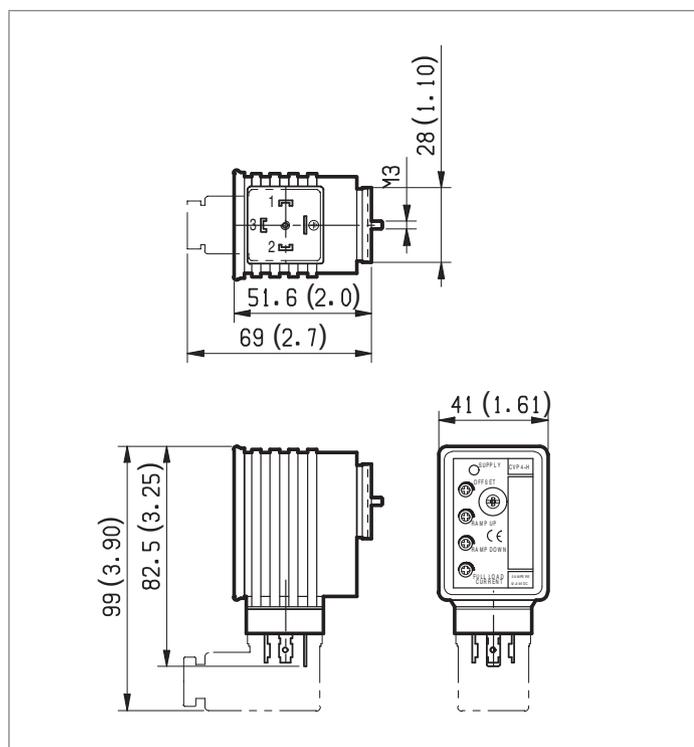

- 7 Flange specifications for coupling to ED intermediate elements.
- 8 For tie rod and tightening torque information see data sheet RE 18301-90.
- 9 A and B ports.

**Electric connection**

- 01** Protection class: IP 65 when connector with seal is properly screwed down.

- 03** Protection class: IP 65 with female connector properly fitted (see drawing).

**Electronic feed regulator**

**Supply:** yellow LED, lit up with power ON.

**Off Set:** minimum current adjustment. Adjust solenoid current so that the desired minimum value is obtained. Clockwise rotation increases current.

**Ramp up:** Ramping up time adjustment.

**Ramp down:** Ramping down time adjustment.

For longer ramping times, turn potentiometers clockwise; for shorter ramping times, turn the potentiometers counter-clockwise.

**Full load current:** Maximum current adjustment. Adjust solenoid current so that the desired maximum value is obtained (up to 2A). Clockwise rotation increases current.

**Frequency adjustment:** it is possible to set the PWM frequency obtaining the desired control sensitivity. After removing the external plastic cover, turn the adjusting screw; clockwise rotation increases frequency from 100 to 500 Hz.
