Insert type Hose burst

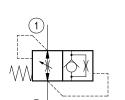

0T.F4.01 - X - Y - Z

Hose burst check valve with orifice

Description

When the lowering speed exceeds preset value, as it might happen in case of hose failure, the flow is blocked. These valves should ideally be screwed directly into the actuator outlet port. Sealing parts are superfinished and enable to lock the load in the position where the actuator is in the moment of hose failure. These valves can be supplied, on request, with an orifice on the disc, allowing an emergency lowering of the load. It is recommended to fit a flow regulator valve downstream the hose burst valve, at the end of the flexible hose, to control the lowering speed at the nominal value. The "R" gap must be adjusted to allow a flow at least 50% over the nominal regulated flow from the actuator.

The valve is only supposed to be operated in case of hose failure. Should this circumstance occur, we strongly recommend to verify the integrity of the valve and eventually to replace it in the event that the pressure spike generated by the hose failure was such to damage permanently some valve components.

Technical data

Other Technical Data

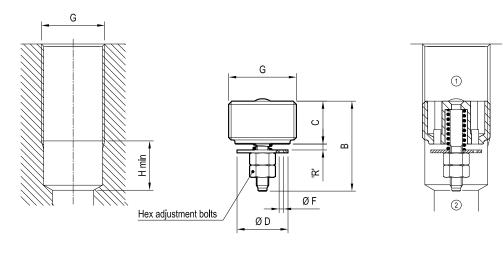

Max. operating pressure bar (psi)	315 (4500)			
Max. flow l/min. (gpm)	see performance graphs ('R'-Q)			
Fluid temperature range °C (°F)	-30 to 100 (-22 to 212)			
Installation torque Nm (ft-lbs)	see "Dimensions" table			
Weight kg (lbs)	see "Dimensions" table			
Special cavity	see "Dimensions"			
MTTFD	150 years see RE 18350-51			
Lines bodies and standard assemblies	Please refer to section "Hydraulic integrated circuit" or consult factory			
Fluids	Mineral-based or synthetics with lubricating properties at viscosities of 10 to 500 mm ² /s (cSt)			
Recommended degree of fluid contamination	Nominal value max. 10µm (NAS 8) ISO 4406 20/18/15			
Installation	No restrictions			

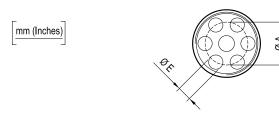

See data sheet RE 18350-50

Note: available also as "Sleeve valve for line mounting"

See data sheets RE 18316-85, RE 18316-86, RE 18316-87 and RE 18316-88

Ordering code

After assembling the standard type valves* are preadjusted at approximately the following values: $0.5 \text{mm} \ (0.02 \text{ in})$ for G1/4 and G3/8 $0.7 \text{mm} \ (0.03 \text{ in})$ for G1/2 and G3/4

Specific flow settings available.

Please contact factory authorized representative for related ordering code with a checked setting.
